- 161K - acne, skin ulceration or exudative erosion, dermatitis around the eyes, genital pruritus, hemorrhoid, photodermatitis, dermatitis due to radiation therapy, diaper rash
- 177A - anal eczema, vaginal thrush, genital eczema, urinary tract infection, blister, papule, profusion
- 165Y - warts, onychomycosis, nail fungus, prurigo papules or nodules

Atopic Dermatitis

- affects 1 out of 7 infants & children

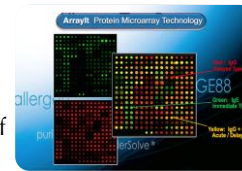

Atopic dermatitis affects 8.7~18.1% of infants and children, and about 30% of atopic dermatitis are pediatric dermatitis. Onset is usually around 6 weeks and last for 2~3 years. In babies, the rash usually starts on the face or over elbows and knees, places that are easy to scratch and rub, and it may further spread to involve all areas of the body.

Clinical presentation are skin lesions such as red rashes, erythema, papules, vesicles, erosions, skin thickening...etc. Persistent and intense itching is a key characteristic and the scratching and rubbing is the main cause of skin damage.

Infants become restless, irritable and have disturbed sleep. Later in life, there is also a high tendency to develop sensitivities, allergic rhinitis, asthma, and various immune disorders. Cold, hot, dryness, emotions, and stress are all factors that often trigger or aggravate conditions. In severe cases, life quality and proper social abilities become impaired.

Wonder what to avoid of eating? ~ GE224 Allergen Test !

Biochip technology has a high degree of sensitivity and is able to test both acute (IgE) and chronic (IgG) allergies. 123 kinds of allergens (including 13 Chinese herbs) are tested helping to create an good reference for personalized immune response profile and dietary plan.

Tips for using PhytoTopical®

1. Gentle and progressive - minimal side effects and cautions compared to conventional treatments with topical steroids or immune-modulatory agents.
2. Prior to using any topical agent, please always spot-test at an inconspicuous spot on the body. (Recommended spot-test sites are behind the ears or on the inner arm.)
3. Results are most efficient on patients without prior use of topical steroids or immune-modulatory agents.
4. For patients who are currently using or have a chronic history of using topical steroids or immune-modulatory agents, please do not cease usage abruptly; mild "Rebound effects" may be initially observed while the body re-adjusts to naturally-healing. (generally within 2~3 weeks)
5. Bacterial or viral infection is a common complication of atopic dermatitis. If conditions are not readily managed, please consult a healthcare professional for assistance.
6. Atopic dermatitis results from a combination of genetic and environmental factors - it is important to pay close attention to the patients' family history and life/work environment. Please remind and ensure that patient follows appropriate lifestyle advices and diet restrictions to help reduce recurrences.
7. It is advisable to establish a monitoring protocol and keep photo records. For chronic patients, it is highly recommended to test for allergens, IgE and IgG...etc.

PhytoTopical® Helping babies and mothers greet everyday with their most beautiful skin and smile!

168R
ointment

Contains:

- *Lithospermi Radix*
- *Scutellariae Radix*
- *Phellodendri Cortex*
- *Sophorae Radix*
- *Glycyrrhizae Radix*
- *Polygoni Cuspidati Rhizome*
